

Active Holder with Locking for iPhone 3G, iPhone 3GS

This is the choice for you who are using your iPhone with navigation and easily want to switch between an upright position and a horizontal position - simply turn the holder into desired position. By using an Active Holder you will always have a fully charged battery. The holder provides for a neat and easy installation.

The Active Holder comes with a USB plug at the end of the cable, which is plugged into a power adapter for connection to the vehicle's 12 Volt socket.

If you have a vehicle with USB stereo interface you can disconnect the power adapter and connect holder USB plug directly to the stereo USB port for charging and playing music from the iPhone.

Your iPhone automatically connects to the charging connector every time you dock it in the holder. The Active Holder is equipped with an Apple-approved cable from Griffin (PowerJolt). The Active Holder is attached to a tilt swivel, which means you can adjust the angle of the device for better viewing and to avoid light reflection on the screen.

Attach onto ProClip Mounting Platform.
